With less fuel, the engine has a decrease in speed. The governor has this action again and again until the governor is in balance. When the governor is in balance the engine speed will be the same as it was before there was a decrease in load. If there is an increase in the load on the engine, the engine starts to make a decrease in speed.

At the core of the 3406's power generation is an inline six-cylinder, four-stroke diesel engine. With an overall displacement of 893 cubic inches, it is engineered with a 5.4-inch bore and 6.5-inch stroke. An onboard turbocharger helps deliver continuous power at the engine's maximum engine speed of 1,500 RPM.
