The temperament test was a variation of a previously validated arena test (Visser et al., 2001) and was carried out on all animals for the duration of the experiment (1 week before and 7 weeks during training) using an indoor arena (22.5 m × 5.5 m) with a concrete floor. A large open umbrella, used as the novel object, was suspended from the ceiling and held at 50 cm above the ground.

Negative versus positive reinforcement: An evaluation of ...

The human digestive system is a complex series of organs and glands that processes food. In order to use the food we eat as energy, our body has to break the food down into smaller molecules that it can process; it also has to excrete (or get rid of) waste. Most of the digestive organs (like the stomach and intestines) are tube-like and contain the food as it makes its way through the body.
