A lab manual for the General Chemistry course, Beran has been popular for the past nine editions because of its broad selection of experiments, clear layout, and design. A two-term manual for General Chemistry This supplementary manual focuses on chemical principles and techniques. The Laboratory Manual for Principles of General Chemistry, tenth edition, provides a broad scope of experiments coupled with a clear layout for ease of use. The manual delivers material for two or three course terms. It also assists chemistry students in knowing how to time various techniques in the lab environment. The companion manual is organized into topic sections, such as Chemical and Physical Properties; Atomic and Molecular Structure; Gases; and Solutions.

This new edition of the Beran lab manual emphasizes chemical principles as well as techniques. The manual helps students understand the timing and situations for the various techniques. The Beran lab manual has long been a market leading lab manual for general chemistry. Each experiment is presented with concise objectives, a comprehensive list of techniques, and detailed lab intros and step-by-step procedures.

Silberberg's Principles of General Chemistry offers students the same authoritative topic coverage as its parent text, Chemistry: The Molecular Nature of Matter and Change. The Principles text allows for succinct coverage of content with minimal emphasis on pedagogic learning aids. This more streamlined approach to learning appeals to today's efficiency-minded, value-conscious instructors and students without sacrificing depth, clarity, or rigor.

This remarkably popular lab manual has won over users time and time again with its exceedingly clear presentation and broad selection of topics and experiments. Now revised and fine-tuned, this new Seventh Edition features three new experiments: Water Analysis: Solids (Experiment 3); Vitamin C Analysis (Experiment 16); and Hard Water Analysis (Experiment 30). In addition, nearly 90% of the Prelaboratory Assignment Questions and Laboratory Questions are either new or revised.

Prepared by John H. Nelson and Kenneth C. Kemp, both of the University of Nevada. This manual contains 43 finely tuned experiments chosen to introduce students to basic lab techniques and to illustrate core chemical principles. You can also customize these labs through Catalyst, our custom database program. For more information, visit <http://www.pearsoncustom.com/custom-library/catalyst> In the Thirteenth Edition, all experiments were carefully edited for accuracy and safety. Pre-labs and questions were revised and several experiments were added or changed. Two of the new experiments have been added to Chapter 11.

Each experiment in this manual was selected to match topics in your textbook and includes an introduction, a procedure, a page of pre-lab exercises about the concepts the lab illustrates, and a report form. Some have a scenario that places the experiment in a real-world context. For this edition, minor updates have been made to the lab manual to address some safety concerns.
