Vegetarian diets do not contain meat, poultry or fish; vegan diets further exclude dairy products and eggs. Vegetarian and vegan diets can vary widely, but the empirical evidence largely relates to the nutritional content and health effects of the average diet of well-educated vegetarians living in Western countries, together with some information on vegetarians in non-Western countries.

Connecting Global Priorities: Biodiversity and Human Health

Human Connections: A Powerful Health Care Strategy. Although the term “ social network ” has come to mean connections on the Internet, in a scientific context a social network refers to relationships that occur between real people in real time, on a regular basis: friends, family and co-workers. Real human connections and the behavioral influences that result from them can be so powerful, they have given rise to an area of science called “ network science, ” which examines how behavior ...
