Discusses the manipulation and corruption within professional sports due to its deep connection with mass media, and includes information on sports gambling, doping, and fixing games to provide optimal media ratings.

This unique book delves into a number of intriguing issues and addresses several pertinent questions including, should gambling markets be privatized? Is the 'hot hand' hypothesis real or a myth? Are the 'many' smarter than the 'few' in estimating betting odds? How are prices set in fixed odds betting markets? The book also explores the informational efficiency of betting markets and the prevalence of corruption and illegal betting in sports.

Since the first athletic events found a fan base, sports and statistics have always maintained a tight and at times mythical relationship. As a way to relay the telling of a game's drama and attest to the prodigious powers of the heroes involved, those reporting on the games tallied up the numbers that they believe best described the action and best defined the winning edge. However, they may not have always counted the right numbers. Many of our hallowed beliefs about sports statistics have long been fraught with misnomers. Whether it concerns Scottish football or American baseball, the most revered statistics often have little to do with any winning edge. Covering an international collection of sports, Statistical Thinking in Sports provides an accessible survey of current research in statistics and sports, written by experts from a variety of arenas. Rather than rely on casual observation, they apply the rigorous tools of statistics to re-examine many of those concepts that have gone from belief to fact, based mostly on the repetition of their claims. Leaving assumption behind, these researchers take on a host of tough questions- Is a tennis player only as good as his or her first serve? Is there such a thing as home field advantage? Do concerns over a decline in soccer's competitive balance have any merit? What of momentum-is its staying power any greater than yesterday's win? And what of pressure performers? Are there such creatures or ultimately, does every performer fall back to his or her established normative? Investigating a wide range of international team and individual sports, the book considers the ability to make predictions, define trends, and measure any number of influences. It is full of interesting and useful examples for those teaching introductory statistics. Although the articles are aimed at general readers, the serious researcher in sports statistics will also find the articles of value and highly useful as starting points for further research.

Every spring, the first four days of the NCAA men s basketball tournament attracts a horde of basketball bettors to Las Vegas. From the tip-off of the tournament s first game on Thursday morning to the final whistle on Sunday, throngs of bettors overwhelmingly male sit in smoky casinos obsessively watching as many as forty-eight college basketball games. This book immerses readers in that action. In The Madness of March: Bonding and Betting with the Boys in Las Vegas, Alan Jay Zarella travels to The Strip and gives us a front-row view of the betting culture that surrounds the frenzied first weekend of the tournament. Alternating between humorous accounts of gamblers exploits and cultural theories on sports in society, Zarella provides an engaging analysis of the sporting ritual that such gambling has become. With forays into the history of the tournament, the background of sports betting, and a little betting of his own, Zarella raises the question of whether this subculture of March Madness is a blessing or a curse and what, finally, it all means.

The purpose of this How-to Manual is to get familiar with all the methods available on Senti and Sentiero devices. Tutorials are provided on how to do TEOAE, DPOAE, ABR, ASSR, ac. Reflex & Audiometry.

This book, first published in 2005, offers an introduction to the application of algebraic statistics to computational biology.

A contributed handbook on the complexities of portfolio management that includes the most up-to-date findings from leading practitioners in the fixed income securities market.

Few people manage to make money from gambling, and fewer still make a living from it. Written for hardened and novice betters alike, Joseph Buchdahl's essential guide examines, through various numerical techniques, how fixed odds punters may learn to beat the bookmaker, protect profits through a sensible approach to risk management, and turn high-risk gambling into a form of low-risk investment.

This volume offers state-of-the-art research in service science and its related research, education and practice areas. It showcases recent developments in smart service systems, operations management and analytics and their impact in complex service systems. The papers included in this volume highlight emerging technology and applications in fields including healthcare, energy, finance, information technology, transportation, sports, logistics, and public services. Regardless of size and service, a service organization is a service system. Because of the socio-technical nature of a service system, a systems approach must be adopted to design, develop, and deliver services, aimed at meeting end users' both utilitarian and socio-psychological needs. Effective understanding of service and service systems often requires combining multiple methods to consider how interactions of people, technology, organizations, and information create value under various conditions. The papers in this volume present methods to approach such technical challenges in service science and are based on top papers from the 2019 INFORMS International Conference on Service Science.
