While executives are keen to harness organizational knowledge and improve business performance, the topic of how academics can produce rigorous and relevant theory in working relationships with practitioners is a much contested topic. Many aspects of this knowledge co-creation can create tensions, and the ways in which research is conducted and published can affect practitioner acceptance, as well as its consequent uptake and use in different contexts. Expertly compiled by Jean Bartunek and Jane McKenzie, with contributions from global thinkers in the field, this book offers a concise and up-to-date review of the essential analysis and action underlying scholarly engagement with the world of business. It discusses the sorts of capabilities academics need to collaborate effectively with practitioners and illustrates good practice through international case studies drawn from acknowledged centres of excellence. These show how to negotiate different constituencies with different priorities, values, and practices to work together to produce research of rigor and relevance. It will be a key reference and resource for all researchers who are engaged with practitioners, and an invaluable tool for training academics to develop research with impact.

Why is the culture of a stagnant workplace so difficult to improve? For decades, business leaders have been equipping themselves with every book, philosophy, reward, and program the so-called experts have convinced them to buy into, yet companies everywhere continue to struggle with toxic cultures, and the unhappiness and low productivity that go with them.In Trust Factor, neuroscientist Paul Zak shows that innate brain functions hold the answers we've been looking for. Put simply, the key to providing an engaging, encouraging, positive culture that keeps your employees energized is trust. When someone shows you trust, a feel-good jolt of oxytocin surges through your brain and triggers you to reciprocate. This simple mechanism creates a perpetual trust-building cycle between management and staff, and--voilà!--the end of stubborn workplace patterns.Incorporating science-backed insights for building high-trust organizations with successful examples from The Container Store, Zappos, and Herman Miller, Trust Factor explains• How brain chemicals affect behavior• Why trust gets squashed• How to stimulate trust within your employees• And moreStop recycling the same ineffective strategies and programs for improving culture. Learn to cultivate a workplace where trust, joy, and commitment compounds naturally by harnessing the power of neurochemistry!
