The Minelab Explorer II also differed from the Explorer XS by a larger 1/4" headphone jack and a Dual Coordinate (Fe-Co) digital display. The clearly displayed 'Fe-Co' read-out (two numbers) allowed a metaldetectorist to see the target's Conductivity (CO) and Ferrous (FE) content simultaneously. This volume draws together a series of new studies into various aspects of the archaeology of conflict. Part of the volume focuses on conflict in the twentieth century, with several papers dealing with the growing field of First World War archaeology, which is also the main theme of the extended editorial. Further contributions focus on a variety of subjects, including the use of historic maps in locating the remains of 16th century sieges, the impact of disease on a 17th century army and a discussion of the political context of cultural research heritage in Ireland with respect to battlefield heritage.

Bosworth stands alongside Naseby and Hastings as one of the three most iconic battles ever fought on English soil. The action on 22 August 1485 brought to an end the dynastic struggle known as the Wars of the Roses and heralded the dawn of the

Tudor dynasty. However, Bosworth was also the most famous lost battlefield in England. Between 2005 and 2010, the techniques of battlefield archaeology were used in a major research programme to locate the site. *Bosworth 1485: a battlefield rediscovered* is the result. Using data from historical documents, landscape archaeology, metal detecting survey, ballistics and scientific analysis, the volume explores each aspect of the investigation _ from the size of the armies, their weaponry, and the battlefield terrain to exciting new evidence of the early use of artillery _ in order to identify where and how the fighting took place. *Bosworth 1485* provides a fascinating and intricately researched new perspective on the event which, perhaps more than any other, marked the transition between medieval and early modern England.
