This is a very comprehensive book about molecular cell biology. It starts from the very basics of chemistry and protein, and ends with a very clear molecular description of cell cycles and cancer. I wouldn't recommend it as a textbook for someone who's just learning the basics, especially if it is for a class, since the amount of information is sometimes too much to handle.

Editions of Molecular Cell Biology by Harvey Lodish

Although I don't claim to be a molecular biologist, nor have I read beyond chapter 5 of Lodish's "Molecular and Cell Biology", this textbook feels admirably thorough in its treatment of its subject, bringing the reader up to date on a wide range of the detail generated in the field over the past few decades.
