which is parallel to line AB. As you know, an infinite number of lines can be drawn through point C, but only one of them will be parallel to line AB. The parallel postulate is very important in doing geometric proofs. It is basically a way to formally say that when given one line, you can always draw another

In geometry, parallel lines are lines in a plane which do not meet; that is, two straight lines in a plane that do not

intersect at any point are said to be parallel.

Colloquially, curves that do not touch each other or intersect and keep a
