Algae are autotrophic protists that can be found in pond water. Most of these microorganisms are green in color, while a few may be yellowish-brown. Algae are also diverse, and may either be unicellular or multicellular. Some of the most common forms of algae that may be found in pond water include spongomonas, euglena as well as chlamydomonas. While some of these microorganisms (chlamydomonas) swim freely in search of food, others (spongomonas) live in gelatinous matrices and use special ...
