This 2016 Article IV Consultation highlights that the real output of Honduras in 2015 grew at 3.6 percent, slightly higher than projected. From the demand side, growth was supported by the recovery in private consumption—which responded positively to a reduction in gasoline prices and strong remittances inflows—and a boost in investment. On the supply side, the recovery in manufacturing and agriculture supported greater activity. The outlook for 2016 remains favorable. Real GDP through the second quarter of 2016 grew by 4.1 percent (year over year) broadly consistent with IMF staff projection of 3.6 percent for 2016. This projected growth performance is supported by scaled up public infrastructure investment and a supportive monetary policy stance.

Standby forces of the African Union are expected to deploy rapidly into high-intensity conflict zones. Inherently they stem from and are expected to work effectively with regional militaries of differing capabilities. But first, the AU has to muster the political will to deploy the force at all and do it all on a shoestring budget. VreA and Mandrup's edited volume illuminates through the chapter contributions the breadth of challenging political hurdles that the African Union's African Standby Force faces. They do this in clear and readable terms. This important book is imperative for anyone seeking to understand the rapid deployment forces on which African states have optimistically pinned the future of their collective security aspirations.

This paper presents an overview of Kenyan economic development. It discusses recent economic development, outlook, and risks related to Kenyan economy, as well as policy and structural reforms. Although Kenya ' s macroeconomic performance remains robust, external shocks complicated achievement of some program ' s macroeconomic objectives. In light of persistent external risks and a weaker outlook, the authorities have requested continued program engagement with the IMF under new 24-month Stand-By Arrangement and Standby Credit Facility (with access of 130.67 percent and 65.33 percent of quota, respectively). The new program includes a comprehensive package of measures targeting a significant reduction in vulnerabilities, paving the way for an eventual exit from IMF arrangements.

The AREAER provides a description of the foreign exchange arrangements, exchange and trade systems, and capital controls of all IMF Member countries.
