This comprehensive book provides a balanced overview of the current research on divorce. The authors examine the scientific evidence to uncover what can be said with certainty about divorce and what remains to be learned about this socially and politically charged issue. Accessible to parents and teachers as well as clinicians and researchers, the volume examines the impact of marital breakup on children, adults, and society. Alison Clarke-Stewart and Cornelia Brentano synthesize the most up-to-date information on divorce from a variety of disciplinary perspectives with thoughtful analysis of psychological issues. They convey the real-life consequences of divorce with excerpts from autobiographies by young people, and they also include guidelines for social policies that would help to diminish the detrimental effects of divorce.

According respect to both prevailing models of divorce-as inevitably disastrous and as potentially challenging, even growth-producing-Dr. Twaite and his colleagues undertake a systematic and critical review of the literature on the differential psychosocial adjustment of children after a divorce. They address studies in ten predictor domains, some expectable (age, gender, custody arrangements), some less conventional, before advancing a predictor of their own: the effectiveness of parenting behavior (custodial, non-custodial, and step-) as experienced by the child. Finally, they proffer correctives, substantive and procedural, for future investigations, including recognition of the dynamics among the variables and the need to control for mediating factors in analyzing results. This is a monumental collection in the best tradition of social science research-thorough, responsible, accessible, and of course timely
