The report on design of urban streets was prepared as the participant's notebook for a four and a half day training course of the same title which has been conducted for a number of Federal, state, and local agencies. The report provides practical, state-of-the-art information to aid in design and operation of streets and highways, with emphasis on functional, operational, and safety aspects of design which apply to minor design revisions as well as to major reconstruction and new construction.

Contains information, data, tables, and equations that may be used by building systems designers, architects, acoustic designers and some sound and vibration measurement firms to design environmental systems to meet noise criteria and to analyze measurement data.
